DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 3/30/2005 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US 6,730,750 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-9 and 11-19 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for polyolefin DRA of ultrahigh molecular weight (defined as having inherent viscosity of 10 dl/g), does not reasonably provide enablement for DRA of lower molecular weight. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

The instant claims are identical in scope with those of the parent application, now patented, except for the broadened scope of molecular weight. While the parent claims were limited to DRA comprising ultrahigh molecular weight, the instant claims are

Application/Control Number: 10/777,285

Page 3

Art Unit: 1713

unlimited in this aspect. Therefore, the instant claims are attempting capture those embodiments with molecular weight lower than that characterized as "ultrahigh." However, the specification appears to be devoid of any enabling disclosure of the making of polyolefin DRA of lower molecular weight. Furthermore, the specification clearly states at page 14, lines 18-20, that "the polyalphaolefin polymer <u>must</u> have "ultra-high molecular weight," a term defined herein as a molecular weight corresponding to an inherent viscosity of at least about 10 dl/g." Accordingly, it appears that applicants themselves did not envisage or provide any description of the making of the polyolefin DRA of lower molecular weights now being claimed.

- 4. Claims 10 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roberto Rábago whose telephone number is (571) 272-1109. The examiner can normally be reached on Monday Friday from 8:00 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
